

RHIZOLIZER™ CITRUS

Put roots down with us

WHAT IS RHIZOLIZER™ ?

Rhizolizer™ is a proven soil amendment developed using a blend of soil-specific, high-density fungal and bacterial microbes, including *Bacillus* and *Trichoderma*. The product line focuses on rebuilding soils and their microbial diversity. It has been shown to support increased nutrient uptake and optimal crop yield potential.

Productive crops are built from the ground up, and start with Rhizolizer™.

APPLICATION

Rhizolizer™ solutions are developed at local fermentation centers, allowing them to be optimized for local conditions and specific crops. This fresh fermentation approach and immediate delivery ensures maximum potency and efficacy at the time of application.

ATTRIBUTES

- Freshly Produced
- Proven Efficacy
- Easy Application
- Fertilizer & Spray Compatible

BENEFITS

- Supports Increased Nutrient Availability
- Sustains Increased Root Mass
- Increases Crop Productivity
- Supports Foliar Vitality

IMPROVED ROOT VITALITY = IMPROVED CITRUS YIELDS

Locus AG conducted trials with Rhizolizer™ on hundreds of acres with the majority of Florida's largest growers.

PRE-HARVEST RESULTS SHOWED:

- Up to **80%** increased root mass and root flush¹
- Up to **31%** improved canopy density²
- **11%** larger fruit diameters

¹ Data from different test locations and samples within large groves

² Depending on tree age and timing

Data after three in-season applications of Rhizolizer™

Rhizolizer™ field trials demonstrate improved root flush and improved canopy density.
