GUARANTEED ANALYSIS

Total Nitrogen (N) 26.0%
26% Urea Nitrogen
Sulfur (S) 8.0%

Derived from: DCDS

Also Contains a Non-Plant Food Ingredient

5% Proprietary NanoGro™ Technology

General Information: NITRO-GRO 26 is a proprietary acid-derived clathrate fertilizer enhanced with NanoGro™ technology for faster establishment, improved yield, and increased vigor to root, stem, and leaf. Apply as a fertigation, injection or as a spray applied product. Apply in a minimum of 50 gallons of water per acre when spray applied to foliage. Test NITRO-GRO 26 and any tank mix, on the target crop before making any large-scale foliar applications. Lightly watering in spray applied, direct soil applications, is recommended as the proprietary chemistry has specific soil conditioning properties and performs best when present in the root zone. The nitrogen in NITRO-GRO 26 is stabilized and protected from volatilization and is more efficient than most other nitrogen sources. Additionally, NITRO-GRO 26 is designed to improve inefficient soil and water conditions and improves the performance of other nutrients present in the root zone. This product has a low pH and will not tank mix with all other inputs. A jar test is recommended before tank mix use.

Net Weight: 2,905.00 Lbs. (11.62 Lbs. / Gallon)

Net Contents: 250 Gallons
